

PST14 Standard product

DC-DC conduction cooled from 50W to several kW

Features

- ▶ 12, 24, 48, 72, 110Vdc IN
- ▶ 3 packages up to 150W, 300W, 500W
- ▶ Output from 3V3 to 48Vdc
- ▶ Input filtering EN55022 & transient protection
- ▶ Reverse polarity protection
- ▶ Several outputs, parallel or series operations up to several kW
- ▶ MIL COTS options MIL STD1275, 461, 810, 704

Safety IEC/EN 60950-1, RoHS lead-free-solder compliant

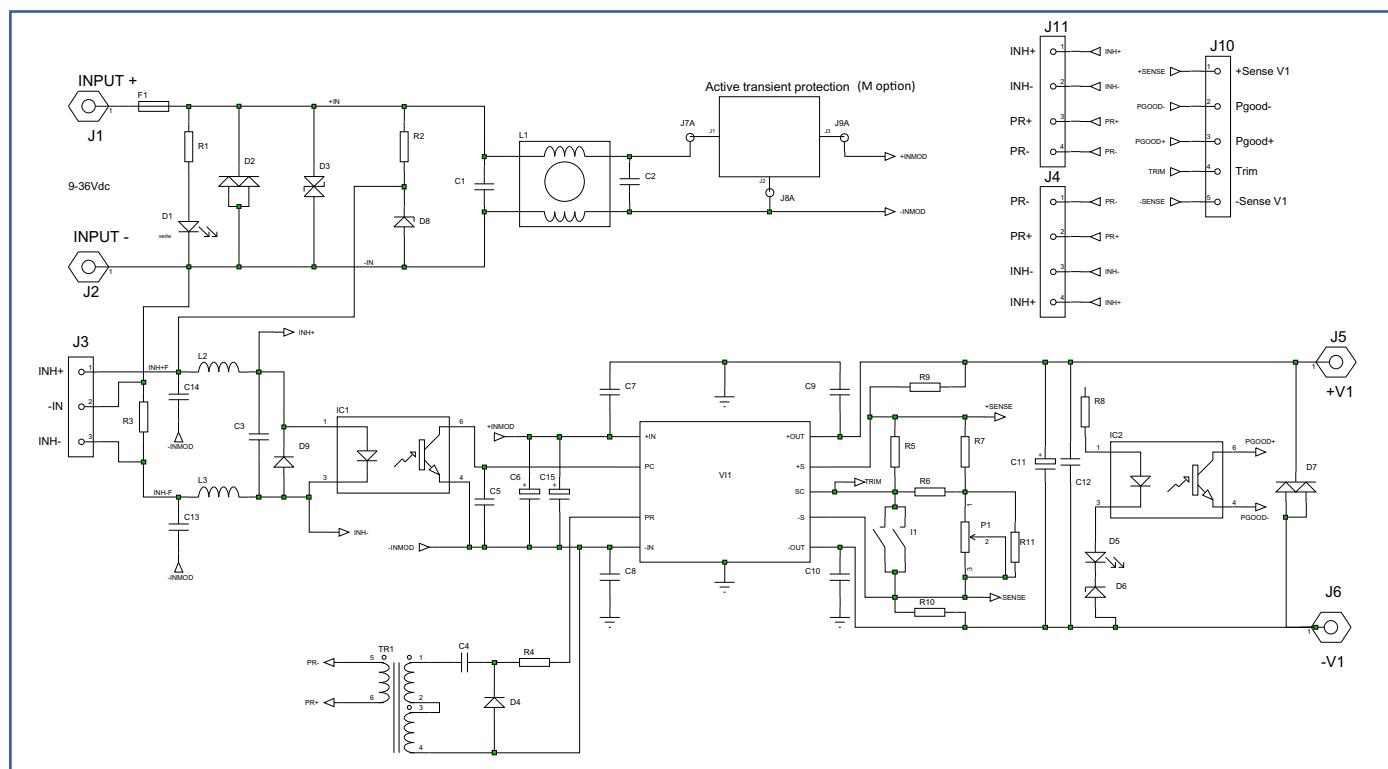

Description

The PST14, very compact DC-DC converter in chassis mount format, incorporates input filtering, input and output protections, very robust mechanical mounting and connection, optional conformal coating, required in most of the severe environment for industrial, railways, defense type of applications. The converter provides high reliability thanks to the integration of Vicor Corp. modules, high efficiency, input-to-output isolation, soft start, overtemperature protection, input over/undervoltage lockout. The converters wide range of inputs are protected against surges and transients and EMI filtered. The outputs are continuously short-circuit proof. The 100°C baseplate operation allows operation in high temperature environment.

The output can be configured in many different output voltages from 3V3 to 48Vdc, can be put in series and parallel, others possibilities are even possible as semi-standard versions.

Wide range of accessories (see page 16) like input & output Bus bars, N+1 oring diodes, parallel cables are available to simplify multi units assemblies. Military options (M) make it suitable for MIL STD compliance.

▼ Options Description

Heatsink (H)

The PST14 is built as standard with a aluminum baseplate as described in the mechanical data. The converter can be delivered with a 15mm height heatsink with longitudinal fins (-H) or transversal fins (-H1). See page 15 for mechanical drawings. 3D models available on the web site. In case of using H or H1 option, the thermal impedance (Rth) of the heatsink mentioned below must be considered for the airflow or maximum power calculation. Conditions : 55°C ambiant, convection (0m/s vertical mounting) and 2m/s airflow:

PST14A -H or H1: Rth@0m/s: 1,8°C/W, Rth@2m/s: 0,8°C/W

PST14B -H or H1: Rth@0m/s: 2,8°C/W, Rth@2m/s: 1,2°C/W

PST14C -H or H1: Rth@0m/s: 3,9°C/W, Rth@2m/s: 1,7°C/W

Ruggedized (M)

The PST14 can be ruggedized to meet MIL-STD810E, MIL-STD461E CE102.

M option with 12&24Vin will comply with MIL STD 1275A on PST14A & PST14B only.

-40°C operation (T)

The thermal grade of the Vicor the DC/DC converters used and other components are changed to comply with low ambient temperature.

Conformal coating (V)

During manufacturing process, when V option is specified, components and pcb are covered with an acrylic coating to address high level of ambient humidity application.

Input Fuse

A fuse mounted inside the converter protects against damages in case of a failure. The fuse is not user-accessible.

Input Reverse Polarity

A diode placed internally across the input will cause the fuse to blow in case of a reverse polarity of input voltage.

▼ Accessories

See page 16 for details.

Accessories are compatible with PST14A, B, C format

Input parallel bus bar with capacitor footprints

The input bus bar simplifies the assembly of 2 or 3 PST14. It includes input extra capacitor footprints for application with long lenght from the source to the PST14.

Output parallel bus bar

Available for 2up & 3up versions, it connects together the differents positive outputs as well as negative output.

Output serial bus bar

It connects the negative of the first unit with the positive of the second to create high voltage configuration.

Output N+1 bus bar including diode

From 1up to 4up, this accessory puts in parallel the outputs with the addition of an oring diode mounted on an aluminium bar.

Inhibition and parallel cable

These 50mm cables allow unit to current share in parallel and allow the user to inhibit all units at the same time.

Input Transient Protection

A VDR (Voltage Dependent Resistor) and a common mode input filter form an effective protection against input transients in severe environments like railways.

When M option is defined for PST14A&B, the unit is incorporating an active protection against high energy transient MIL STD 1275, DO160.

Parallel and Series Connection

A converter output can be connected in series with an output from a separate converter, an internal diode across each output is implemented internally. The maximum output current of a serial-connected outputs is limited by the output with the lowest current limit. Output voltages above 48V (SELV - Safety Extra Low Voltage) require additional safety measures in order to comply with international safety requirements.

Parallel operation is possible with PST14 Mini & Maxi to increase output power (see below parallelling signal).

Redundant Systems Operation

When systems require a very high level of reliability and should work normally in the event of a failure, N+1 redundancy is implemented where N is the number of converter to support power requirement. If one converter fail, the remaining ones still delivers the power to the loads.

Oiring diodes are required to ensure proper N+1 operation (included with optional N+1 bus bar).

Hold-up time

The converter provides limited hold-up time. If a hold-up time is required (some railways applications for example), use external input capacitors of adequate size.

Formula for additional external input capacitor : $C = 2 * P_{out} * t_h * 100 / (V^2 - V_i^2) / n$

whereas :

C = external input capacitance [mF]
 P_{out} = output power [W]
 n = efficiency [%]
 t_h = hold-up time [ms]
 V_i = minimum input voltage
 V = Input voltage level before interruption

Output Current Limitation

See Electrical output data for value.

The converter output is continuously protected against short-circuit by a constant current limitation. The short circuit protection is unlimited, the operating area between nominal power and active protection area working in a constant current mode may lead to power above nominal, then over stress of the internal components.

Thermal Considerations

The converter is designed to be mounted on a dissipative area, in conduction cooling mode. The max. operating temperature is the temperature of the baseplate which should not exceed 100°C. Addition of grease or thermal pad between the converter baseplate and the chassis is mandatory.

Thermal protection

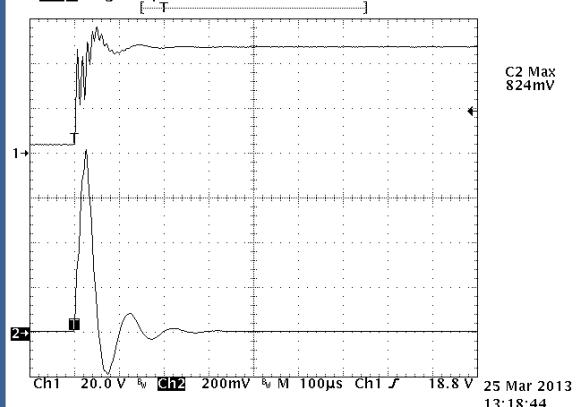

A temperature protection is integrated in each Vicor module, disabling output when heatsink temperature exceeds 105°C. The converter automatically restarts, when the temperature drops below this limit. Nevertheless, exceeding the max operating temperature may cause failures of the converter.

Waveforms

Inrush : PST14B48-48250

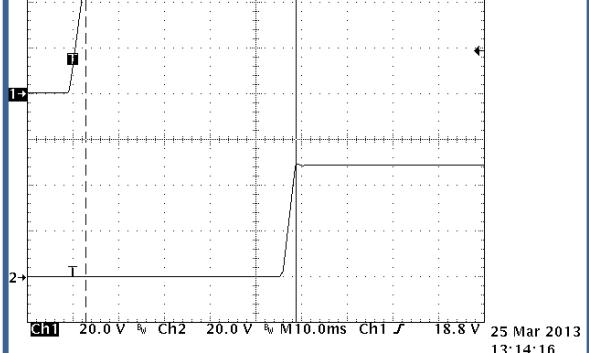

No inrush limiting circuit, peak value and waveform depend on input source impedance. (see table page 2 for input capacitance)

Tek Stop: Single Seq 500kS/s

Start-up time : PST14B48-48250

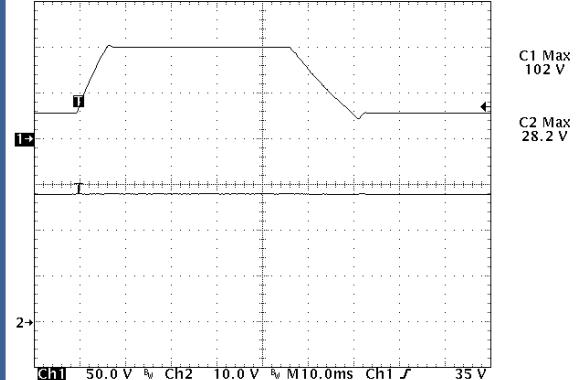

Tek Stop: 5.00kS/s 1 Acqs

100V 50ms Transient protection (M option) : PST14A24-28400-M

Tek Run: 5.00kS/s Hi Res

[T] TRIG

Auxiliary Functions

Primary Inhibit (Remote On/Off)

The inhibit input disables (logic low, pull down or short circuit between INH- and -IN) or enables (logic high TTL, pull up or open-circuit) the converter. This signal is referenced to the input voltage and will disable/enable all outputs at the same time when inhibition & parallel cable is used. In systems consisting of several converters, this feature may be used to sequence the activation of the different converters if inhibition is used separately.

Output Voltage Adjustment

The converter output is adjustable by potentiometer or by an external voltage between trim and -sense (1,23V for nominal). The range of adjustment is +/-10% around nominal output voltage per default, semi-standard versions can be made with adjustment down to -50% with 10% minimum load. Please consult factory for more details.

Sense Lines

This feature enable compensation of voltage drop accross the connector contacts and the load lines.

The voltage between any sense line and its respective power output pin (as measured on the connector) should not exceed the following values at nominal output voltage.

Output type	Total drop	Negative line drop
V1	< 0.5V	< 0.25V

Powergood

Two green leds at input & output indicate the presence of output voltages .

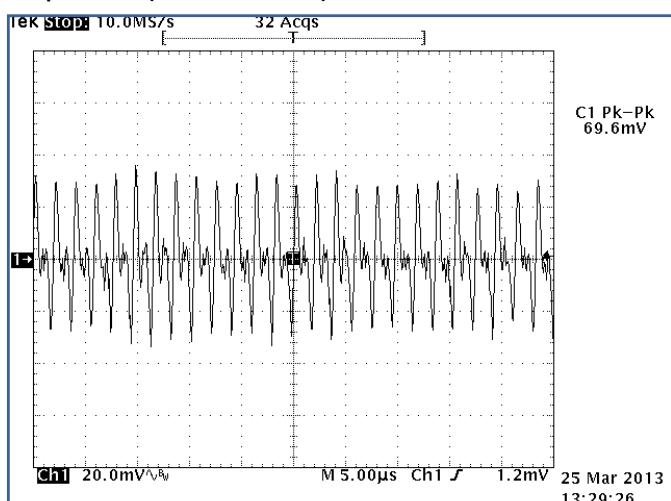

An open collector PGood signal (J10) is open when output failed or closed when unit operates properly.

Paralleling signal

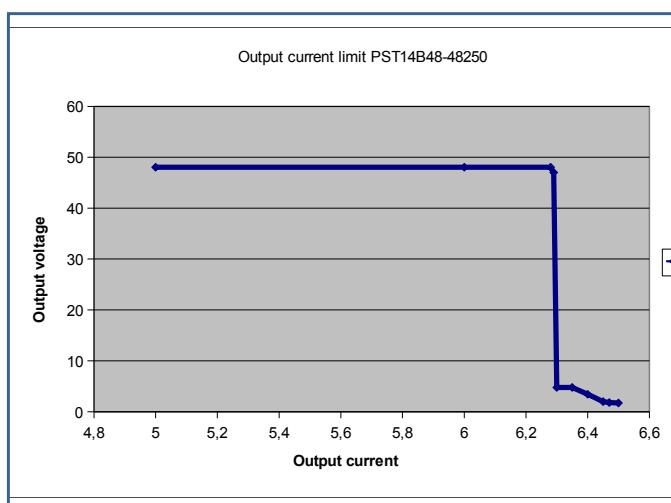

When several units of the same type are used in parallel or in redundant system, the PR+ PR- of each unit need to be connected together through J4, J11 for accurate current sharing. Accessories cable can be used.

Installations Instructions

These converters are components, intended exclusively for integration into other equipment by an industrial assembly process or by a professionally competent person. Installation must strictly follow the safety regulations in respect of the enclosure, mounting, creepage and clearance distances, markings of the end-use application.

Connection to the system shall be made via appropriate connection. The +Vin is internally fused. This fuse is designed to protect the converter against overcurrent caused by a failure, but may not be able to satisfy all requirements. External fuses in the wiring circuit to one or both input pins may be necessary to ensure compliance with local requirements.

Do not open the converters, or the warranty will be invalidated. Make sure that there is sufficient heat dissipation available for conduction cooling. This should be verified by measuring the case of temperature at the specified measuring point, when the converter is operated in the end-use application.

Standards and Approvals

The converters are built to meet the safety standards IEC 60950-1, EN 60950-1.

'Built to meet' mentioned in the different paragraphs of the datasheet means that Power System Technology has designed the product to meet the standard but not certified it in a laboratory.

Electric Strength

Options and configurations

PST14A : MAXI

For single configurations see page 3.

For multiple combination of the **same package**, use P/N as follows.

Units will be delivered with accessories mounted (Bus bar for parallel & serial , N+1).

Example :

2up 2 outputs (see page 3 for V1P1 & V2P2)

PST14A **Vin**-V1P1-V2P2-**O**

2up 1 output

PST14A **Vin**-V1P-**O**

1 output of P1+P2 where P1=P2
(do not put in parallel 2 different power)

3up 3 outputs

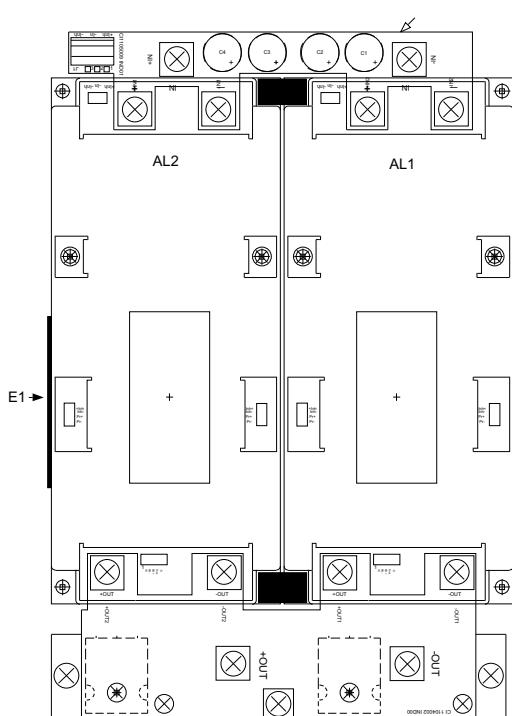

PST14A **Vin** -V1P1-V2P2-V3P3-**O**

3up 2 outputs

PST14A **Vin** -V1P-V2P2-**O**

(P = 2 x P1)

PST14A **Vin** -V1P1-V2P2-**O**

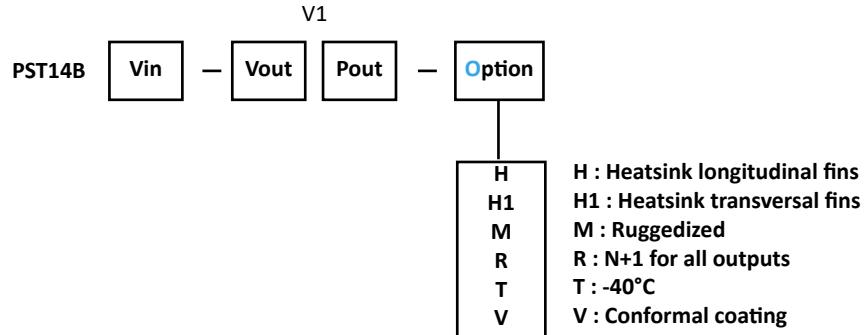

Option

- H** : Heatsink longitudinal fins
- H1** : Heatsink transversal fins
- M** : Ruggedized
- P1** : Parallel V1 & V2
- P2** : Parallel V2 & V3
- R** : N+1
- R1** : N+1 V1 & V2
- R2** : N+1 V2 & V3
- S1** : Serialized V1 & V2
- S2** : Serialized V2 & V3
- T** : -40°C
- V** : Conformal coating

PST14B : MINI

For single configurations see page 4.

For multiple combination of the **same package**, use P/N as follows.

Units will be delivered with accessories mounted (Bus bar for parallel & serial , N+1).

Example :

2up 2 outputs (see page 3 for V1P1 & V2P2)

PST14B Vin-V1P1-V2P2-O

2up 1 output

PST14B Vin-V1P-O

1 output of P1+P2 where P1=P2
(do not put in parallel 2 different power)

3up 3 outputs

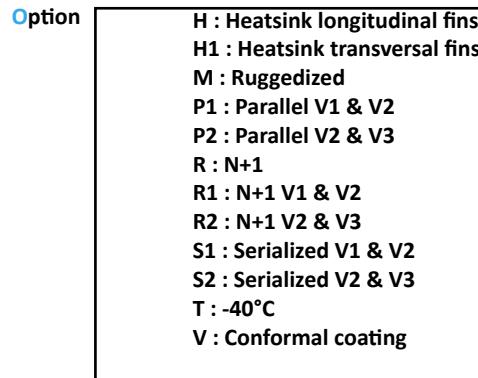

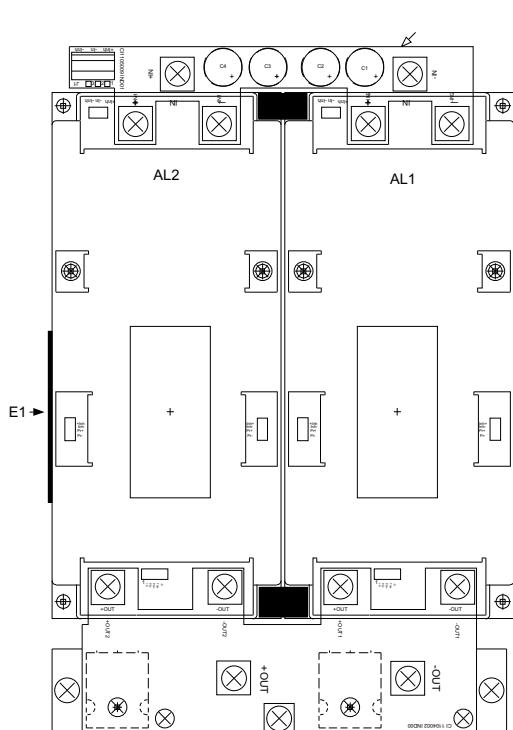

PST14B Vin -V1P1-V2P2-V3P3-O

3up 2 outputs

PST14B Vin -V1P-V2P2-O

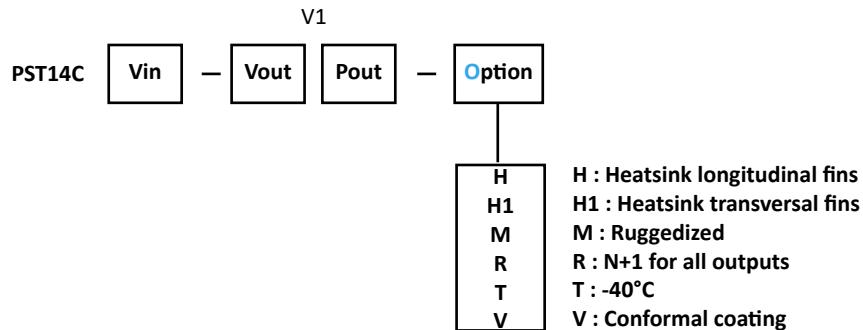

(P = 2 x P1)

PST14B Vin -V1P1-V2P2-O

PST14C : MICRO

For single configurations see page 5.

For multiple combination of the **same package**, use P/N as follows.

Units will be delivered with accessories mounted (Bus bar for parallel & serial , N+1).

Example :

2up 2 outputs (see page 3 for V1P1 & V2P2)

PST14C Vin-V1P1-V2P2-O

2up 1 output

PST14C Vin-V1P-O

1 output of P1+P2 where P1=P2
(do not put in parallel 2 different power)

3up 3 outputs

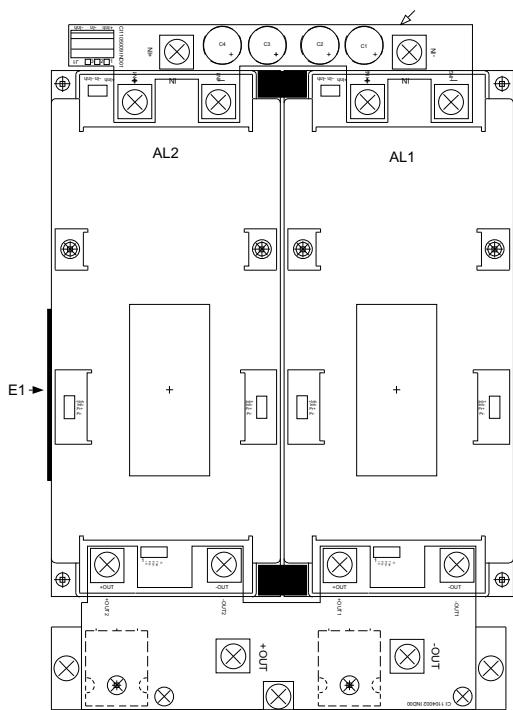

PST14C Vin -V1P1-V2P2-V3P3-O

3up 2 outputs

PST14C Vin -V1P-V2P2-O

(P = 2 x P1)

PST14C Vin -V1P1-V2P2-O
